

## Covey Chucker

The Covey Chucker is the benchmark for lever machines, offering both versatility and safety. Cycling smoothly and quietly, regardless of how quickly birds are thrown, the Covey Chucker is ideal for following pairs, report pairs, and covey rises. It offers 45 degrees of vertical adjustment, which is quickly and easily changed without tools. The Covey Chucker comes with a stand. An optional crazy quail base may be added to offer full 360-degree rotation. The 30-bird interchangeable magazines, available for standard (108mm), midi (90mm), and mini (60mm) clay birds, make reloading necessary only between shooters. With a lever that allows the operator's hands to be clear of both the birds and the throwing arm, the Covey Chucker is the safest manual machine on the market today.
